

# AlcoHawk One Test®

**Simply the best!**

The AlcoHawk One Test® boasts some of the BEST features of any comparable product on the market.

Blow

Stop Blowing

The sample collected indicator ensures a sufficient breath sample has been obtained. Other products lack this important breath alcohol testing feature.

Comparable models require a "blow bag" accessory to collect a sufficient breath sample.

## Sample Collected Indicator

A red dot on the AlcoHawk One Test® tube will change white, letting the user know when a sufficient breath sample has been obtained. Sample integrity is critical in breath alcohol testing - this simple color change is easy for users to understand.

The AlcoHawk One Test® testing level line provides a clear sign of a positive result.

Before Test

After Test

Other products leave you guessing at how many crystals changed color and if there truly is a positive result.

Before Test

After Test

*\*Results from .05% alcohol solution blown from a simulator into the testers.*

## Display of Results

A black line on the AlcoHawk One Test® tube also helps to ensure users understand the test results. When the crystals above the line have changed color, it is indicative of a positive test result (the user's BAC is the chosen testing level or higher). Similar products do not use this method; leaving the users unsure of how many crystals need to change color to indicate a positive result or whether the color has sufficiently changed.

Other products require squeezing, bending or breaking of glass.

Simply push on the AlcoHawk One Test® nozzle ends.

## Nozzle/Puncture System

To begin a test simply push in the nozzle end pieces to puncture the protective foil. No squeezing, bending, or breaking of glass required!
